

Nupan (PNG) Trading Corporation Limited

22nd December 2010

Mr. Kirk William Roberts
Nupan (PNG) Trading Corporation Limited
Section 12 Lot 19 Kuri Street, Mount Hagen.
Western Highlands Province.

Attention MR Kevin Conrad and Miss Frederica Bietta

As the recognized representative of landowners (Incorporated Land Groups) in PNG, I correspond to you as their Power of Attorney, and as their Program Director for Voluntary Carbon Projects, which have been established to cease logging and therefore preserve the rain forests for generations to come.

While the stance in Bali taken by you some years ago against USA aggression did promote and prop you up for your CV, it appears that your UNFCCC REDD+ strategy is at the expense of the people and landowners of PNG. PNG people do not support any part of this strategy.

The people of PNG have only ever heard procrastination and misleading information, while you use the PNG forests and biodiversity to collateralize yourself.

No landowner has ever seen a dollar (kina) from your supposed structures, actions and existence. The PNG ILG's have now asked that you be formally audited to uncover and explain as to where and how any funds you have acquired in the name of PNG have been utilized, and how you are able to represent yourself as self-appointed Ambassador and Special Envoy for Climate Change with no commission from the people or parliament of PNG.

The ILG's also enquire as to what arrangements have been entered into with your so called ' financiers ' and if that arrangement includes any land of PNG being taken away from landowners.

It has been commented that you promise millions in funding from other countries, yet these same countries have put PNG on the lowest priority. The UNFCCC now admits that it is unlikely to see anything from REDD or REDD+ until 2020, let alone a correct mechanism that is supported by all Nations.

Your most recent misrepresentation of PNG was in Cancun Mexico Cop16, where you attempted a massive land grab by trying to make out that 'your' Climate Compatible Development Plan is the correct path for PNG. Its inclusion of a so called REDD+ safeguard promoted by you which denies the ' Human and Environmental rights of PNG people, is unsound advice for them and has no future or compatibility to PNG Customary law. It has never been approved by the people or the parliament of PNG.

Attempted massive land grabs by foreign governments, forcing out the local landowners, and your plan to distribute supposed PNG revenue through the Colombian Business School have also never been authorized and will never be

Nupan (PNG) Trading Corporation Limited

Colombian Business School have also never been authorized and will never be entertained by PNG people. In addition, PNG ILG's do not authorised or allow Miss Frederica Bietta to negotiate for PNG as a Special Adviser in anyway or form.

I have through Nupan invested millions of dollars of personal funds over four years of constant management to develop multiple voluntary carbon projects with landowners all over PNG, and that money has been spent in the villages, and with the people during consultation and creating ILG awareness, in preparing for the ILG's to manage their own futures with their projects.

We have 30 projects on behalf of PNG people that can be implemented in the coming year, and another sixty that will flow from them, and the people do and have always supported myself and the VCS mechanism.

Personally I take affront and claim defamation by your media referral statements such as "Carbon Cowboy" applied to me, and your advice to the Government of PNG that the VCS being 'risky' is most certainly misleading, as currently the VCS is the only sound mechanism available to create a commercial revenue for forest protection. The VCS is a UNFCCC sanctioned Standards Organization, respected world-wide. You are attacking the very organization you supposedly represent!

Landowners have been working tirelessly with me and my group to understand and perform their roles for the present and future, and we have been creating a system that will enable the forests to be saved from logging now, with the revenue generated by carbon trading going to fund health, education, communication, transport, and infrastructure projects and progressive agriculture planning throughout PNG.

PNG projects will provide employment for thousands of people, for 35 to 40 years until restructured.

And 90% of all the revenue generated comes back under the control of the ILG's and the people of PNG, not into someone's private pocket.

On behalf of the thousands of landowners whom I represent, we instruct you to cease these misleading actions immediately that you indulge in by falsely claiming the UNFCCC is bringing money to the people, as to date it has not. It may bring money to yourself and your organization, and if and when it ever comes –it will be for you and those who support you in this fiction, not the landowners and the people of PNG.

Yours sincerely,

Kirk Roberts, Chairman and CEO, Nupan (PNG) Trading Corporation Limited.
